

Colour Management Knowledge Check

This isn't graded, but if you include your name, I'll reach out if I can help clarify anything. If you'd prefer to type your answers, you can email them to me instead.

What are colours, and how do we perceive them?

Explain the difference between a colour model and colour space.

Explain the difference between additive and subtractive colour models.

Why does exporting an image as CMYK not always print with the colours you were expecting? What could you do instead?

What is the difference between RGB and RGBA?

What is one other thing you remember from our class on colour management?

Why does exporting an image as CMYK not always print with the colours you were expecting? What could you do instead?
